

For the scenario below identify the entities, their attributes and appropriate keys

The Angel Warehouse

The Angel Warehouse stores items for its parent company. The warehouse is organised into **bays**, which are storage areas, but the items themselves are stored in bins. Each bay contains a **number of bins**. Each bay is identified by a unique **bay number** and the bay **location** and **the height** of the bay are recorded. Each **bin** has a different **number** within the bay, always starting with bin no. 1, and while some bays have only 5 bins some have over 50. The **size** of each bin is recorded.

Some bays have a parking spot for one **fork lift** to help move items round the warehouse and lift items into bins. Each fork lift is **allocated** to a bay. Each fork lift has a unique **equipment number** and the **maximum carrying weight** of the fork lift needs to be known. Some fork lifts are **petrol** driven while some are **electric**.

For all bins **the maximum loaded weight** must be known.

When an **item** is taken into the warehouse it is assigned a unique **number** and **the date** is recorded as well as the item **weight**. Bins can store a **number of items** and when an item is put in a particular bin this **date** is also recorded. Items can be moved back and forth between bays and bins to optimise the warehouse storage.

Entities

Attributes

(PK) = Primary key

(FK) = Foreign key

Entities	Attributes
Bay	Number of bins Bay number (PK) Location Height Bin number (FK)
Bin	Bin number (PK) Size Number of items Maximum loaded weight Item number (FK) Bay number (FK)
Fork Lift	Allocated Equipment number (PK) Maximum carrying weight Petrol or electric
Item	Item number (PK) Date Weight Bin Number (FK)
